

VxRail Test Drive™ for Technical Decision Makers

We are pleased to invite you to a one-day workshop on Dell EMC VxRail. This workshop will give you a preview into how leveraging Dell EMC VxRail and VMware vSAN will benefit your IT environment and business. This course includes hands-on lab exercises using demo pods that have been designed for you to explore VxRail and vSAN management capabilities.

This solutions-oriented training is designed for end-user DC Architects and Senior Engineers who are responsible for developing data center solutions that span compute, network, and storage.

The VxRail Workshop will cover:

1. Dell EMC HCI: Even if you aren't building a cloud now, starting with HCI to modernize your data center is a great first step to future proof your organization.
2. VMware SDDC and Multi Cloud Vision: VMware Cloud and Cloud Foundation
3. vSAN 201
4. VxRail Overview and Differentiation
 - o Hyperconverged OS, VxRail Manager, LCM, API's, ESRS, other included software
 - o Data Protection overview
 - o Licensing
 - o Single vendor support
 - o Hardware options including Intel (SSDs, NVMe, Optane)
5. Networking of VxRail and Benefits of SmartFabric Services
6. Solution Deployment Options and Use Cases
 - o VVD on VxRail, VCF on VxRail, VMware Cloud on Dell EMC, 2-node Container/DevOps (PRA/PKS), VDI (Horizon)
7. Deployment
 - o GIS capabilities and service offerings

Hands-on Labs

- Lab 1: Getting started
- Lab 2: Monitoring and Maintenance
- Lab 3: Cluster Expansion (Scaling Out)
- Lab 4: Lifecycle Management (LCM)
