## VMware, Check Point, and FlexITY invite you to an exclusive hands-on Security Workshop

Private cloud build-outs, public cloud adoption, hybrid cloud migrations, digitization, and application-centric development require a new approach to securing IT environments. To be effective, security must remain consistent and exist across the private and public cloud to protect your environment against breaches.

Join VMware, Check Point, and FlexITY for this exclusive hands-on workshop. Come learn how VMware NSX and Check Point CloudGuard are working together to address your security challenges from your data center private cloud to the public cloud and truly providing advanced threat protection for your hybrid cloud solution.

This interactive, technical workshop will review:

- ✓ NSX and CloudGuard integrated solutions for consistent policy management and enforcement of advanced security protections.
- ✓ Multi-layered defenses to provide consistent security for both north-south and east-west traffic
- ✓ Implementing advanced security protection for the hybrid cloud with consistent management and policy configuration across all cloud resources.
- ✓ Hands-on-labs that walk you through how to get started with NSX and CloudGuard

You'll experience an interactive, small class setting, enjoy hands-on learning with the latest labs, get your specific questions answered, and network with peers in a

casual environment.

Space is limited. Save your spot today.
